Project Name	Calculating Family Expenses using Service Now
Maximum Marks	4 Marks

Empathy Map Canvas:

The Empathy Map Canvas is a simple and effective tool that helped our team understand the users of the *Calculating Family Expenses Using ServiceNow* system. It allowed us to visualize user behaviors, attitudes, needs, and challenges. By creating this map, we ensured that our solution was aligned with the actual experiences and goals of families managing their household finances.

Purpose:

Creating the empathy map allowed the team to:

- Understand user frustrations and expectations regarding expense tracking and budgeting.
- Identify daily challenges faced in monitoring income, expenses, and savings.
- Build system features that match user priorities such as automation, ease of access, and accurate reporting.
- Ensure that each function—from data entry to analytics—addresses genuine household financial pain points rather than assumptions.

User Perspective Captured:

Aspect	Details Captured
Says	"I want one place where I can manage all my household expenses." "It would help if I received reminders before crossing my monthly limit."
Thinks	"Is this month's spending higher than usual?" "Could I save more if I tracked every small expense?"
Does	Records some expenses on paper or mobile notes. Reviews bills only when money runs short.
Feels	Worried about not saving enough. Disappointed by time wasted in manual tracking.

Outcome:

Through this empathy mapping process, the team:

- Prioritized user-friendly dashboards, quick-entry forms, and automated alerts.
- Designed flexible reports that show category-wise and monthly summaries.
- Integrated workflow automation to eliminate repetitive manual entries.
- Created a system that promotes transparency, better decision-making, and long-term financial discipline for families.

Empathy Map Canvas

The Empathy Map Canvas helped the team understand the end users of the Family Expense Management System built on ServiceNow. It facilitated visualization of user thoughts, feelings and behaviors to design a user-centric solution.
